Jolly Matic

The Jolly Matic Inox automatic vacuum machine is requested by both professional users and domestic users who want a superior quality product.
For the bodywork we chose stainless steel which, in addition to giving an elegant and professional appearance to the product, simplifies cleaning and is very resistant.

The pump, the most important organ, is very powerful and is designed to work for a long time. It requires no maintenance or oil topping up.

The assembly takes place with artisanal care, exclusively in Italy, using only first choice components. The products are tested by a technician who also takes care of the visual inspection: only if everything is perfect can they leave the factory. And if something doesn't go right or if there are any problems in use, we are always available with an unbeatable technical assistance service.

The packaging machine is the most feature-rich among those in the Jolly series but we have managed to simplify its use as much as possible: the digital controls are convenient and intuitive. The machine starts in automatic mode, just press a single button and the electronic board takes care of everything for you.

It is possible to activate the manual welding mode, for example to avoid crushing a delicate product or sucking up liquids. The sealing time can also be set manually to use lighter or heavier bags.

We recommend using embossed vacuum bags but the machine can also package in smooth or cooking vacuum bags.

Do you need more information or do you want to proceed with the purchase? Just fill out the form at the bottom of the page!

Technical specifications	
Model	Jolly Matic
Voltage	230 Volt - 50 Hz
Power	400 W
