

Multipla 50

The Tecla Multipla 50 packaging machine is a versatile machine as it is able to operate both with vacuum bags, whether smooth or embossed, or with Vacuum Box containers with the appropriate fitting.

The machine is therefore without limits as it is possible to vacuum pack any solid or liquid food and without the product being crushed.

The bodywork is made of satin stainless steel, the controls are robust and intuitive. The machine's vacuum pump is extremely powerful, which makes packaging operations very quick.

Like the entire range of external suction vacuum packaging machines, Tecla Multipla 50 is entirely Made in Italy.
